

Domino | Solve rate

Across observation-noise settings

MF MB w/o features MB w/ features

Points = all-seed means. Noiseless: n = 1; noisy: n = 2. Solve rate includes train + test.

MB w/ features has one measured setting. Lines join measured adjacent settings; no extrapolation.

Earlier MB runs use older code. Read step costs alongside solve rate.

Categorical x-axis; small offsets reveal overlapping points. Snapshot: 2026-09-08 13:05 UTC.
